

# An Odd Duck

By Perry Bailey Copyright 1974, 2000

1. Fold in half on the diagonal in both directions then fold the top point down to the middle.

2. Mountain fold the sides to the center of the model then Valley fold it in half on the diagonal.

3. Grab the inner flap and bring it up as far as you can while sinking the upper corner.

4. Fold a rabbits ear on each side of the body as if making the fish base.

5. Reverse fold the upper flap up, then squash fold the rabbit ears on both sides.

6. Pleat the flap inward so that it comes out like the next diagram.

7. Reverse fold the lower flap up with in body so that a part of it will stick out the front to form the feet.

8. Fold the bottom of the model up into the interior then fold the top edge in the front down so form the head a little better.

All of which makes for a truly Odd Duck!
