

# Starship (Racer)

by Perry Bailey © 1973–1999  
inspired by Kunihiro Kasahara

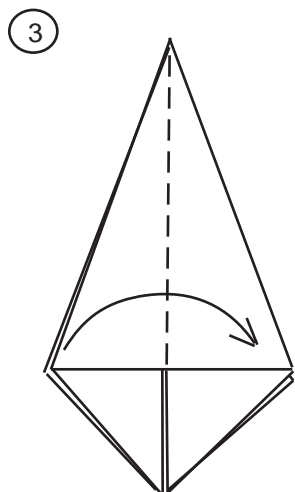

Yet another model that  
should only be made from  
foil paper!

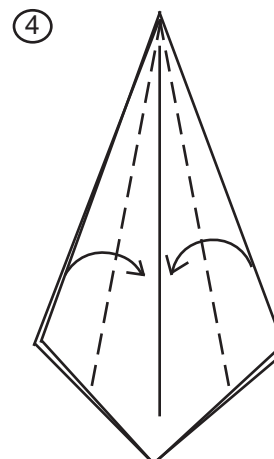

Start with the preliminary base and squash fold the right flap as shown in diagram 2,

Then repeat the squash fold on the other three flaps, as if making the frog base.

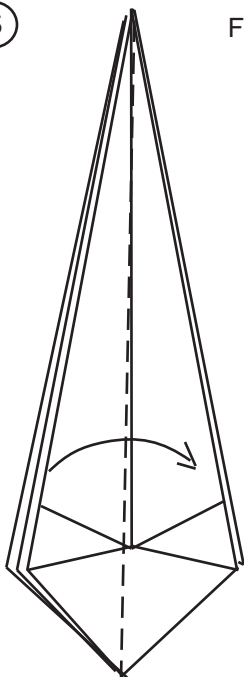

Now fold over one flap on both sides.

Valley fold the sides to the middle to thin the model down. Repeat on all sides, that is three more times..

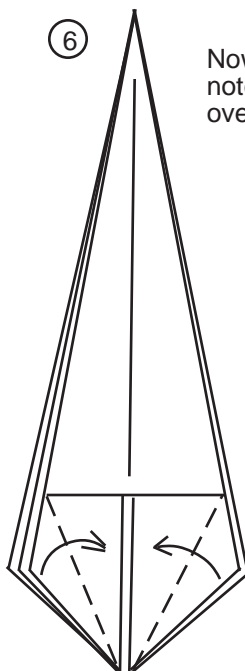

5

Fold one flap over on both sides.

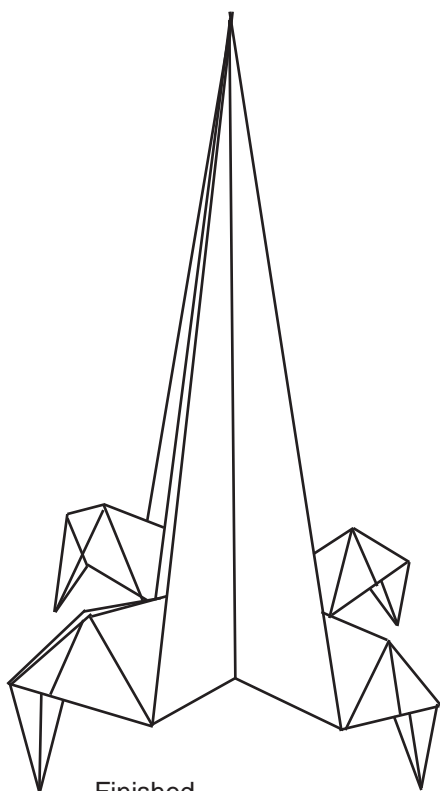

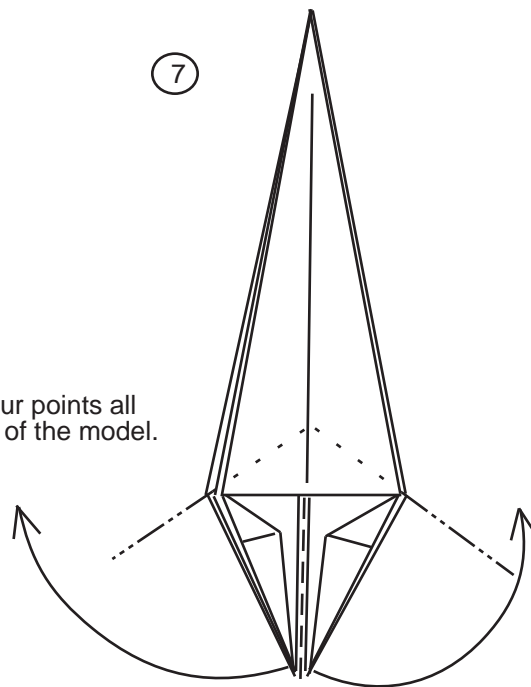

6

Now fold inwards the outside edges, note that they do not go all the way over. Repeat on the other three sides.

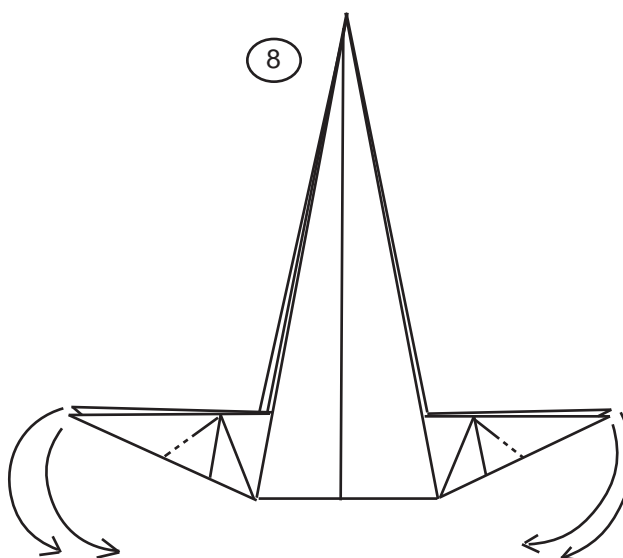

Reverse fold up all four points all the way to the center of the model.

7

Finished

8

Reverse fold the four legs down evenly so it will stand correctly. Then either even out the flaps so they are equidistant or use a tool to bring the four sides out if you prefer.
